

Cassette Software

Model PHT 6018

Market Simulation

A game which helps you understand how
businesses operate.
You and your opponent are faced with these
decisions:

- Can you profitably build more products?
- Should you increase your advertising budget?
- Do you raise your prices?

The choices you make determine whether your
profits increase or your company goes bankrupt.

Requires the use of a cassette tape recorder (not
included) for loading the program contents into
the TI-99/4 Home Computer memory.

MARKET SIMULATION

Description

Author: Texas Instruments

Language: 99/4 BASIC

Hardware: 99/4 Home Computer
Disk Controller and Drive or Cassette Recorder

Media: Diskette and Cassette

Market Simulation is an educational game which allows two people to compete in a simulation of the market place. Each competitor has his own company. Both sell the same product. The cost of building the product, the cost of storing inventory, the cost of borrowing money, and the number of products that can be sold each quarter without the benefit of advertising are the same for each company.

Each company's success is determined by how well the player manages the production level, the advertising budget, and the pricing strategy. The competitors have an opportunity to alter business policy each quarter. Decisions are made based on information displayed on the screen each quarter: net profit, percentage of market share, costs, inventory size, cash, and accumulated assets. The effects of policy decisions are also revealed each quarter when the changes to these items are displayed.

Another factor affecting the company's success is the random events that happen to every business and cause unexpected delays in product shipments or unforeseen expenses. The computer determines when such an event takes place and what its effects are.

The game ends when one company accumulates 12 thousand dollars in assets or is bankrupt.

Making a business profitable depends on many factors such as the quality of the product sold, its attractiveness to the consumer and the economic climate. Because some of these factors are difficult to assess and duplicate in a game, Market Simulation uses a simplified model of the competitive market place. The game is based on an analysis of the relationship of production costs, advertising, and pricing.

Manufacturing costs are crucial in determining whether a company can make a profit. Fixed expenses, such as rent or depreciation, real estate taxes, property insurance, and cost of capital equipment used in production, do not vary regardless of the number of units produced. Variable costs, which include the cost of materials used in building the product and the wages of the workers who build the products, change depending on the quantity of goods being produced. Other costs, such as operating costs, maintenance of facilities, storage, and selling expenses, also affect the selling price of a product and, in turn, the profits a company can make.

If the production costs are high, a selling price which returns a profit to the manufacturer may be above the price that a consumer would ordinarily pay. At this point, advertising comes into play. Advertising increases the consumer's awareness of and desire for the product and overcomes the hesitancy to purchase. Markets for products are often enlarged and sometimes created by advertising. A wise business manager determines the effect advertising has on a particular product and then decides how large the advertising budget should be to maintain maximum profits.

Pricing of a product obviously affects sales volume and, therefore, the profits generated. A price that is too high may not attract enough customers to generate sufficient profits for the business to grow. A price that is too low may give the company a large market share, but no profits.

Occasionally, the cost of producing a product becomes so high that increased advertising may not change the consumer's reluctance to purchase. At this point, the sales of the product and maybe even the company itself begin to decline. Unless the company finds a way to decrease production costs, it may become bankrupt.

STEP 1: If the computer is not already in the BASIC mode, select TI BASIC. To load the program from a diskette, insert the diskette into the disk drive, type

OLD DSK1.MARKET

and press ENTER.

To load the program from a cassette tape, insert the cassette into the recorder, type

OLD CS1

and press ENTER. The computer then displays directions for loading the tape. Refer to "Loading Cassettes" if you have difficulty in loading the program from the cassette.

NOTE: Copies of the program are located on both sides of the tape. If for any reason you experience trouble loading the program, try again, using the other side of the tape.

STEP 2: When the cursor reappears, type RUN, and press ENTER. When the MARKET SIMULATION title screen appears, press ENTER.

A synopsis of the game is displayed. Read this carefully, and press any key. The computer prompts you to choose whether you wish to begin a new game or continue a game in progress.

If you wish to begin a new game, enter 1. If you choose to continue a game, enter 2. If you select option 2, the computer prompts you to enter the amount of cash and inventory that Company 1 and 2 had when the game was stopped. You then enter the variable product cost that was in effect when the game was stopped. Finally, you enter the quarter number with which you wish to resume the game.

Once you have determined whether you will play a new game or continue an old one, data on fixed and variable costs, selling level, storage fees, and interest charges are

displayed. Only the variable cost (production cost per unit) changes as the game progresses. Remember these figures because they affect the cost of producing your product. When you have finished reading this display, press any key to begin the game.

STEP 3: A three-part display appears on your video screen. The first part displays the following financial information for two quarters:

PROF	Profit
M%	Market share
CASH	Cash on hand
SOLD	Number of products sold during this quarter
INV	Number of products on hand at the end of the quarter
ASSET	Combined value of the inventory and cash

The middle part of the display is reserved for messages which affect the data entered in the game or signal the end of the game.

The bottom part is used by each player to enter the production level or the number of products to be built this quarter (PRD LEV), the advertising budget (ADV BUD), and the unit price of the product (UNI PRI). The data entered here is determined by the information displayed for the last quarter on the upper portion of the video screen. After each competitor has entered the data, the effects of the business decisions are displayed in the new quarter. In turn, this quarterly information and any messages displayed in the middle of the screen are used as the basis for decisions for the next quarter.

The game is over when either company reaches \$12,000 in assets or is bankrupt. If you and your opponent do not have time to finish the game, it may be continued later. Write down the pertinent data for each company: cash and inventory. Also record

the variable production cost and the last quarter number. Press SHIFT C (CLEAR) to stop the program. To begin the game again, load Market Simulation and enter RUN. Select the option for continuing an old game, and enter the necessary data.

Two copies of each program are provided on the cassette tape. A set of all programs listed on the cassette tape label is located on both sides of the tape. If for any reason you experience trouble loading or accidentally erase a program, another copy is available on the other side of the tape.

To attach and operate your cassette recorder, refer to the User's Reference Guide. Follow these instructions carefully, and the programs should load easily. However, if your computer does not respond when you press ENTER while loading the package, your cassette recorder's drive motor may not be compatible with the Home Computer's circuitry.

Although the computer may not be able to operate the cassette automatically, you may be able to operate your cassette manually. Connect the red and white plugs to the cassette unit as described in the User's Reference Guide, but do not connect the black plug. Follow the procedure for loading data as described. When the message "PRESS CASSETTE PLAY" is displayed, press the ENTER key immediately after pressing the cassette's PLAY keys. If the data has been successfully loaded, you may continue to operate the cassette manually.

Some states do not allow the exclusion or limitation of implied warranties or consequential damages, so the above limitations or exclusions may not apply to you in those states.

LEGAL 85-ED0115

This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

1. Be sure that the diskette or cassette you are using is the correct one. For a diskette, use the Catalog command on your Disk Manager Command Module to check for the correct program; for a cassette tape, check the label.
2. If your computer does not respond to the RUN command, be sure to select TI BASIC and load the program before you try to use Market Simulation.
3. Ensure that your cassette recorder or disk system is properly connected and turned on. Be certain that you have turned on all peripheral devices before you turn on the computer.
4. If your program does not appear to be working correctly, press SHIFT C (CLEAR) and remove the diskette from the disk drive or cassette from the recorder. Reinsert the diskette or the cassette, and follow the User Instructions carefully. If the program still does not appear to be working properly, remove the cassette or the diskette from the computer, turn the computer off, wait several seconds, and turn it on again. Then load the program again.
5. If you are having difficulty in operating your Home Computer or are receiving error messages, refer to "Maintenance and Service Information" and "Error Messages" appendices in your User's Reference Guide for additional help.
6. If you continue to have difficulty with your Texas Instruments computer or the Market Simulation package, please contact the dealer from whom you purchased the unit or program for service directions.

MARKET SIMULATION

Limited Warranty

THREE-MONTH LIMITED WARRANTY HOME COMPUTER SOFTWARE MEDIA

Texas Instruments Incorporated extends this consumer warranty only to the original consumer purchaser.

WARRANTY COVERAGE

This warranty covers the case components of the software package. The components include all cassette tapes, diskettes, plastics, containers, and all other hardware contained in this software package ("the Hardware"). This limited warranty does not extend to the programs contained in the software media and in the accompanying book materials ("the Programs").

The Hardware is warranted against malfunction due to defective materials or construction. THIS WARRANTY IS VOID IF THE HARDWARE HAS BEEN DAMAGED BY ACCIDENT OR UNREASONABLE USE, NEGLIGENCE, IMPROPER SERVICE OR OTHER CAUSES NOT ARISING OUT OF DEFECTS IN MATERIAL OR CONSTRUCTION.

WARRANTY DURATION

The Hardware is warranted for a period of three months from the date of original purchase by the consumer.

WARRANTY DISCLAIMERS

ANY IMPLIED WARRANTIES ARISING OUT OF THIS SALE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO THE ABOVE THREE MONTH PERIOD. TEXAS INSTRUMENTS SHALL NOT BE LIABLE FOR LOSS OF USE OF THE HARDWARE OR OTHER INCIDENTAL OR CONSEQUENTIAL COSTS, EXPENSES, OR DAMAGES INCURRED BY THE CONSUMER OR ANY OTHER USER.

Some states do not allow the exclusion or limitation of implied warranties or consequential damages, so the above limitations or exclusions may not apply to you in those states.

LEGAL REMEDIES

This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

MARKET SIMULATION

Limited Warranty

PERFORMANCE BY TI UNDER WARRANTY

During the three month warranty period, defective Hardware will be replaced when it is returned postage prepaid to a Texas Instruments Service Facility listed below. The replacement Hardware will be warranted for a period of three months from date of replacement. TI strongly recommends that you insure the Hardware for value prior to mailing.

TEXAS INSTRUMENTS CONSUMER SERVICE FACILITIES

Texas Instruments Service Facility
P. O. Box 2500
Lubbock, Texas 79408

Geophysical Services Incorporated

IMPORTANT NOTICE OF DISCLAIMER REGARDING THE PROGRAMS

The following should be read and understood before purchasing and/or using the software media.

TI does not warrant the Programs will be free from error or will meet the specific requirements of the consumer. The Consumer assumes complete responsibility for any decisions made or actions taken based on information obtained using the Programs. Any statements made concerning the utility of the Programs are not to be construed as express or implied warranties.

TEXAS INSTRUMENTS MAKES NO WARRANTY, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, REGARDING THE PROGRAMS AND MAKES ALL PROGRAMS AVAILABLE SOLELY ON AN "AS IS" BASIS.

IN NO EVENT SHALL TEXAS INSTRUMENTS BE LIABLE TO ANYONE FOR SPECIAL, COLLATERAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE PURCHASE OR USE OF THE PROGRAMS AND THE SOLE AND EXCLUSIVE LIABILITY OF TEXAS INSTRUMENTS, REGARDLESS OF THE FORM OF ACTION, SHALL NOT EXCEED THE PURCHASE PRICE OF THE SOFTWARE MEDIA. MOREOVER, TEXAS INSTRUMENTS SHALL NOT BE LIABLE FOR ANY CLAIM OF ANY KIND WHATSOEVER BY ANY OTHER PARTY AGAINST THE USER OF THE PROGRAMS.

Some states do not allow the exclusion or limitation of implied warranties or consequential damages, so the above limitations or exclusions may not apply to you in those states.
